

Work log of team

المزريطة ويب سكول | HCI

Work log for each student inside the project.

1. We also did other group work by searching to write CSS or html code, but in the end, we assigned each one of us a specific job to be responsible for.
2. We faced several problems that we collectively cooperated with, and they were in uploading the project files, where we did not do this work, but this matter was resolved by using short videos on YouTube (1)
3. We also used our colleagues in other teams to solve some of the problems we faced.

Yehia Mahmoud Ayoub

- Scenarios of the system: I wrote the script by tracing pages one by one and taking notes
- Login: The login file consists of headers file and navigation
- Index: home page contains from headers and body and navigation
- Registration: The add new user file consists of headers file and navigation

El -Hassan Muhammed Farid

- HTML & CSS & style: we made styling by bootstrap and all the front-end dev.
- General Manager: we made a sidebar which contains (assign workers, see customer progress, summary of all department), you will take the data of them and write it in the database.

Rana Abdel Moneam

- System architecture: we made sequence of files to make it friendly to understand the data flow of the folders and files. (Drawn by hand).
- Deployed project Publish on ooowephost: (1)

Mahmoud Zayed

- Worker: we made the worker if he in which department
- department Management: we made a sidebar which contains (assign workers, see costumer progress, summary of all department), you will take the data of them and write it in the database.
